Tools Required

For your own protection we recommend that you wear safety boots and gloves.

Spanner

Flathead screwdriver

Phillips screwdriver

Tape measure

Drill

Spirit level

Pencil

Sealing tape

Tools required for installing:

10mm

Installation

Please note: Before starting any installation, turn off the water supply.

Please note: Before commencing any installation, the desired location should be checked before drilling, so that no pipes or wires can be damaged

A fully qualified and competent person should install this product.

This towel rail can only be used with water pressure of less than PN 0.5MPa (5g/cm², 5Bar) and water temperature below 100 °C.

If the temperature exceeds 48 °C please show a warning sign near the product to avoid burning and scolding accidents

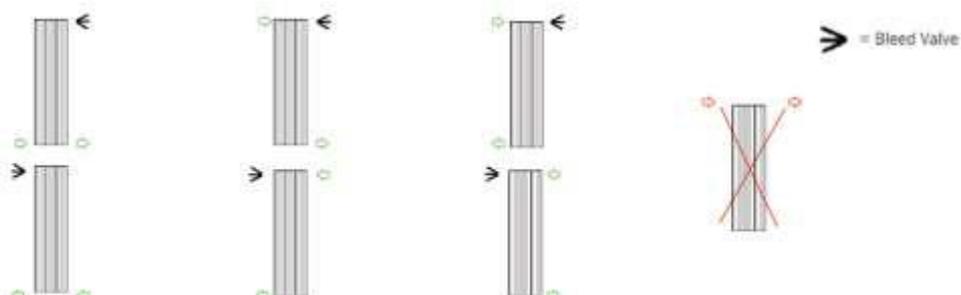

The product is only suitable for use on indirect or sealed central heating systems including combination boilers.

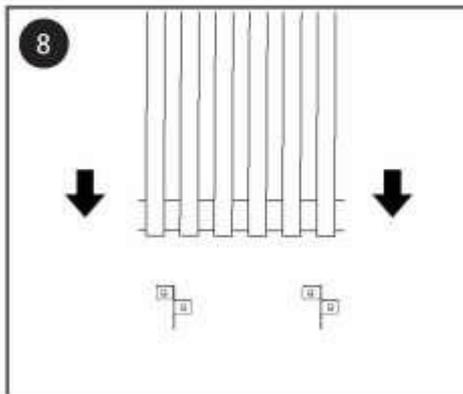

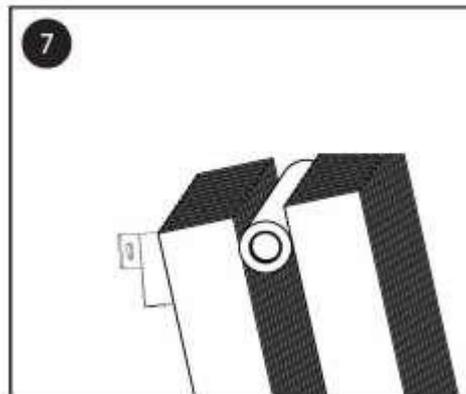

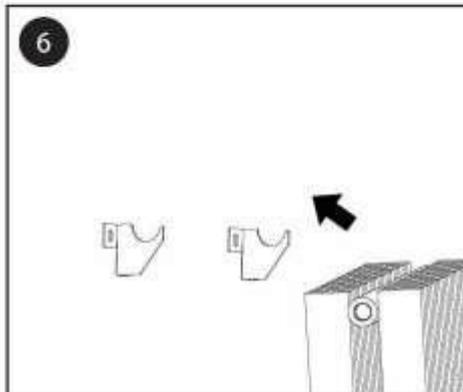

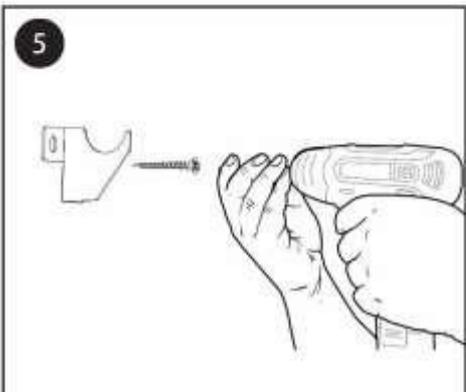

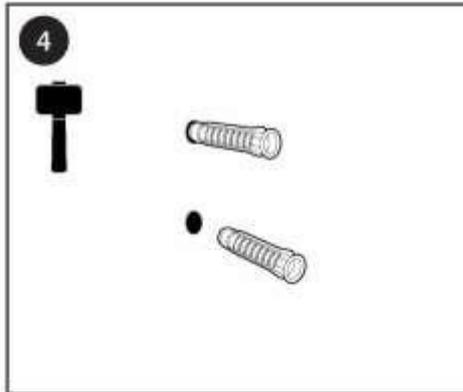

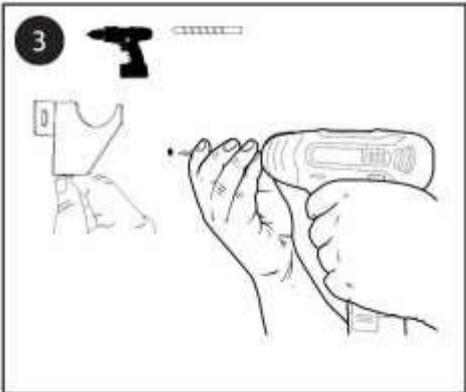

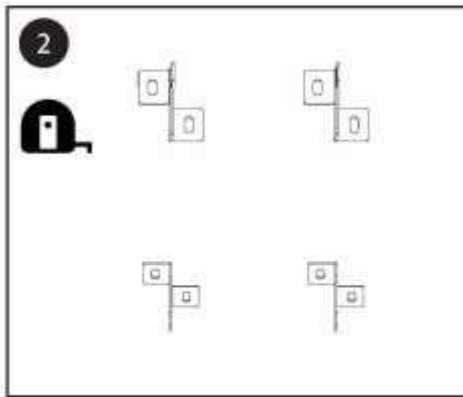

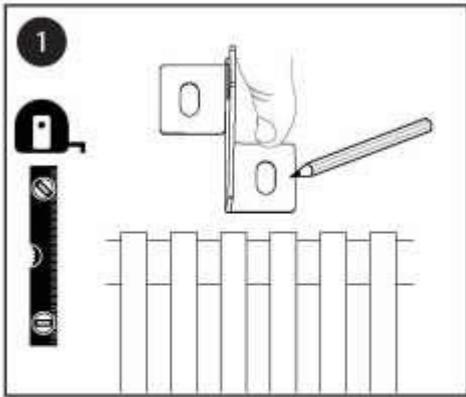

To ensure you can enjoy your radiator for as long as possible, it is essential you first **FLUSH YOUR HEATING SYSTEM WITH A CENTRAL HEATING CLEANSER**, this will clear any waste from the system. Following the cleanings of the system you must **PROTECT THE SYSTEM WITH A CENTRAL HEATING INHIBITOR**. These two simple steps will greatly increase the efficiency and lifespan of your central heating system. Failure to complete these steps increases the chance of pinhole leaks, and will also invalidate the guarantee on your radiator.

Installation Instructions

Valve installation advice :

Please ensure that your radiator valves are fitted as per the below diagrams ensuring that a bleed point always remains at the top of the unit. If connecting both feeds to the bottom it is recommended that a baffle is used.

- 1) Decide positions to install
- 2) Positioning brackets on wall
- 3) Drill holes on the wall
- 4) Put plastic wall plugs into holes
- 5) Fix the brackets on the wall
- 6/7/8) Hang the product on the brackets

Finally, fit the radiator valves to the pipework and connect to the radiator valve tail and tighten all connections.

After installation

- After the above installation, turn on the water supply and using the flathead screwdriver, open the air vent via the central screw, open the inlet valve and let the water rush into the radiator. Check all connections for leaks.
- Once water overflows from the air vent, this means that there will be no air bubbles present.
- Use a screwdriver to close the air vent and then the radiator is ready to use

Care Instructions

This radiator is made from steel with powder coating finish. To maintain the surface of your product (especially when subjected to steam or splashes), wipe with a clean damp cloth and wipe dry.

Do not use abrasive cleaning agents or materials which can strip and scratch the surface; the use of these agents or materials can invalidate your guarantee.

It is recommended to wipe and dry on a regular basis.
